

A legacy of innovation in air solutions
brings to you a range of air purifiers like no other.

Introducing,
AIR ONE

The surest way to
breathe pure

3-in-1 filter

Nothing less than pure air
for your loved ones

Featuring a Pre-filter, High Efficiency HEPA filter
and an Activated Carbon Filter to keep dust,
allergens, smoke, and more, at bay.

4 fan speeds

Adjust the speed of purification
as per your needs

With 4 fan speed options, you can now adjust the
speed of filtration basis the indoor air quality.

Auto/Silent Mode

A good night's rest is a touch
of a button away

The silent mode dims PM2.5 indicator's light and optimizes
your purifier's performance to lower noise levels, so that
you can wake up fresher and more energized.

Filter replacement reminder

Know when your purifier
needs a change, easily

Never compromise on the quality of air you inhale
with the handy filter replacement reminder.

PM2.5 display

Monitor air quality in real time

The purifier's smart PM2.5 display and colour indicator keeps you up to date on the quality of air.

	CADR (m ³ /hr)	Area Covered (sq ft)	Product Dimensions HxWxD (cm)	Weight (kg)	Power Consumption (Watt)
AP2006	260	300	34.6x17.3x52.6	5.2	20
AP3006	360	550	41.0x21.0x62.8	7.2	30
AP6006	510	760	46.0x23.0x71.0	9.7	60

Why do you need an air purifier?

On an average, we spend more than 75% of our time indoors. However, indoor air is often more polluted than the air outside:

1. Indoor smoke contains a range of health-damaging pollutants, such as small particles and carbon monoxide. In fact, particulate pollution levels may be 20 times higher than accepted guideline values.
2. Household air pollution causes several diseases, including pollen allergies, stroke, heart disease, Chronic Obstructive Pulmonary Disease (COPD) and even lung cancer.

An air purifier helps you by eliminating harmful pollutants, and purifying the indoor air.

How to choose the right air purifier?

Choosing the right air purifier for your room depends on two factors:

1. Clean Air Delivery Rate (CADR): The rate at which an air purifier delivers clean air, usually measured in CMH (Cubic Metre/Hour). This value is defined by the manufacturer.
2. Air Changes per Hour (ACH): The number of times the air inside a room passes through an air purifier, within an hour. For example, if the air inside your room is purified every 20 minutes, your air purifier undertakes 3 air changes in an hour.

You can calculate the area covered by the air purifier using the formula: $CADR / (1.7 \times 8 \times ACH)^*$

**1.7 is the standard conversion of CMH (Cubic Metre/Hour) to CFM (Cubic Feet/Min). 8 is the standard height of the room in feet.*

What does each filter do?

1. Pre-filter: Filters larger dust particles, hair and dead skin.
2. HEPA Filter: Removes smaller particles of size PM0.3-2.5, pollens and allergens.
3. Activated Carbon Filter: Keeps the room smelling fresh by eliminating pet odour, smoke, paints and VOCs.
